

Project Innocence

“How can DNA be used to solve crimes more effectively?”

Come visit our booth to learn all about project innocence and how DNA is used in crime investigations. Project innocence is an organization dedicated to releasing wrongfully convicted criminals through DNA. The booth has a large focus on DNA and how it's utilized in a crime scene setting. There's also plenty to learn about DNA's double helix form and the chemicals that put it together. We have various fun and interactive games and puzzles based around DNA and crime statistics and even a large model of a DNA strand! You would be guilty to not come see us!
