

How Does Disease Spread?

Students wanted to learn about the myth behind Zombies. They altered their perspectives from the conclusion that Zombies are “The Walking Dead” to the conclusion that Zombies are no more than people fighting a severe infection/disease. From this development, students began researching epidemics and pandemics. They explored all aspects of disease including symptoms and cures/vaccines.

Visitors will learn about epidemics and pandemics, as well as the various ways which disease is spread. Interactives include a game of infection, the creation of “zombie slime”, as well as encountering “real life” zombies.
