

What is the future of technology in the body?

This project elaborates on the future of technology and the benefits it will have in our daily lives. Our group has explored the benefits technology can do for our own bodies such as a NFC(Near Field Communication) chip implants. Which is show cased at our hands-on booth. For the public to better learn the future implications and the future landscape of the usage of tech implants. Visitors can drop by, swipe their smart phones with NFC compatibility, and get real time information about our project. Biohacking is a fairly new practice that can lead to major impacts in our lives and future society.
